PREFACE

Our primary purpose in preparing this bibliographic series is to develop a comprehensive research and information services program for those interested in management of and research on the environments and resources of the Chesapeake Bay region. This work is the second continuation and enlargement of the Chesapeake Bay Bibliography begun over four years ago when the Chesapeake Research Consortium, Inc., of which VIMS is a member, was in its early inception. The Chesapeake Bay Bibliography, Volume III, Maryland Waters follows guidelines established in the first volume on the James River and the second volume on Virginia Waters. Other volumes may follow later and maintenance revisions are planned.

Books, periodicals, government, institutional, and academic reports, theses, and dissertations have been consulted to compile the citations contained in the bibliography. It has been our intention to include listings from all sources and of all types, "grey" and otherwise, in order to present as complete a compendium as possible. Although we cannot boast of being complete, we are adding references daily.
ACKNOWLEDGEMENTS

Financial support for compiling the citations in this volume was provided by National Science Foundation Research Applied to National Needs (RANN) program grants to the Chesapeake Research Consortium, Inc. (GI-34869, GI-38973) and the General Fund of the Commonwealth of Virginia through its appropriation to the Virginia Institute of Marine Science.

Publication costs for this volume of the Chesapeake Bay Bibliography were provided by the Maryland Department of Natural Resources and the Virginia Institute of Marine Science Coastal Zone Management programs with funds provided by the Office of Coastal Zone Management, National Oceanic and Atmospheric Administration, U. S. Department of Commerce.

Of the many individuals who provided assistance for this project, we particularly wish to thank Susan O. Barrick, Head Librarian at VIMS, for helping us to obtain the references and Frank J. Wojcik, Systems Analyst, for preparing the computer program for this bibliography.

GUIDE TO USERS

The Chesapeake Bay Bibliography, Volume III, Maryland Waters is a subject index of literature concerning the Chesapeake Bay from the Maryland-Virginia state line to the fall line of the Susquehanna River. Subject terms were chosen from the Water Resources Thesaurus, a list of terms suggested for such indexes, published by the Office of Water Resources Research of the U. S. Department of the Interior (1966). Additional descriptors were added where geographic or other specialized concerns made them necessary (e.g. Patuxent River, blue crabs, oyster industry).

As each citation was read, a maximum of ten descriptors was assigned. The bibliography is divided into three sections, followed by a list of descriptors and cross references. The first section, the subject or descriptor index, lists descriptors alphabetically. Under each descriptor are the accession numbers of the pertinent citations followed by the list of descriptors for each of those citations. The second section gives the complete citations listed chronologically by accession numbers. The third section lists citations alphabetically by author.

The user can approach the bibliography in two ways: by author or by subject:

1. If the user knows the author of a particular report, he can go directly to the author index (Section 3) where he will find the complete citation and descriptors for that report (as well as any other reports by that author).

2. If the user wants information on a particular subject, "blue crab", for example, he can go to the subject index (Section 1) where he will find accession numbers to all reports containing information on the blue crab. Since descriptors are presented with the accession numbers, the user can more easily discriminate among the various listings to identify specific reports needed. For example, if he is interested only in molting of the blue crab, he can select only those accession numbers which give "molting" as a descriptor. Then, taking these accession numbers, the user can refer to the listing by accession numbers (Section 2) to find the complete citations.
