

The Climate Corner

Migration and Ocean Warming

Why migrate?

We don't actually know!

It's likely they are either searching for food or looking for mates

This panel features a light green background. At the top, it asks 'Why migrate?'. Below this, it states 'We don't actually know!' and 'It's likely they are either searching for food or looking for mates'. The text is flanked by two illustrations of cownose rays: one on the left is shown swimming, and one on the right is shown with several smaller rays around it, possibly representing a social group or mating activity. Arrows point from the text towards these illustrations.

Can prey migrate?

Oysters Blue crabs Softshell clams

This panel has a light green background and asks 'Can prey migrate?'. It shows three illustrations of prey items: an oyster, a blue crab, and a softshell clam. Below each illustration is a red 'X' mark, except for the blue crab which has a green checkmark. The labels 'Oysters', 'Blue crabs', and 'Softshell clams' are placed below their respective marks.
