

**Mandy Bromilow** is a marine scientist with the NOAA Chesapeake Bay Office (NCBO) where she focuses on fisheries and marine habitat issues. Currently, her work includes coordination of blue crab and invasive catfish management, development of forage indicators, and analysis of environmental conditions and their impacts on key fishery resources in the Chesapeake Bay. Mandy received a B.S. in Ecology and Evolutionary Biology and a minor in Oceanography from the University of Michigan before going on to get her M.S. in Marine Science at William and Mary's Virginia Institute of Marine Science. While Mandy has broad interests in marine ecology, she is particularly interested in the role of ecological interactions in fisheries management and marine species conservation.
