

Chesapeake Bay Oyster Population Estimation

Monitoring Program: BASINS

State: VIRGINIA

Year: 1996

Basins in Virginia

For convenience and ease of data presentation, the Chesapeake Bay tributaries in Virginia waters have been grouped into "Basins". The Basins used for Virginia in this project include: Potomac tributaries (includes Nomini Creek, Coan River, Yeocomico River), Great/Little Wicomico, Rappahannock (includes Corrotoman River), Piankatank, York/Mobjack Bay (includes East, North, Severn, Ware, and Perrin Rivers), Poquoson/Back, James (includes Elizabeth, Lafayette, and Nansemond Rivers), Lynnhaven, and Eastern Shore/Tangier (includes Tangier and Pocomoke Sounds as well as all tributaries on the Bay side of Virginia's Eastern Shore.)

Data Types and Notes

Note that bushels are reported as VIRGINIA bushels. A Virginia bushel is 3003.9 cubic inches and thus differs from a US bushel (2150.4 cubic inches) or a Maryland bushel (2800.7 cubic inches).

A. Fishery Independent data: These data are from the patent tong survey conducted jointly by the Virginia Marine Resources Commission and the Virginia Institute of Marine Science. A hydraulic patent tong deployed from the R/ V *J.B.Baylor* collects a 1 m² sample of oysters and bottom material at each sampling location.

B. Fishery Dependent data

B1. Public/Commercial effort - The total number of bushels of oysters landed within the state of Virginia during 1996 as reported by commercial fishermen is presented. These data were obtained from the Virginia Marine Resources Commission Fisheries Statistics Division. One bushel of oysters was assumed to contain 500 market oysters. A market oyster is 3 inches or 76 mm from its beak to its hinge (shell length).

B2. Private effort - The total number of bushels of oysters landed within the state of Virginia during 1996 as reported by private leaseholders is presented. These data were obtained from the Virginia Marine Resources Commission Fisheries Statistics Division. One bushel of oysters was assumed to contain 500 market oysters. A market oyster is 3 inches or 76 mm from its beak to its hinge (shell length).

C. Restoration Efforts

C1. Reefs - unexploited sanctuaries - Annual dive surveys on constructed oyster reefs by the Virginia Marine Resources Commission began in 1997. Thus, no data are available in this category for 1996.

C2. Replenishment - exploited shell plants and three dimensional structures - These data are from the annual replenishment reports produced by the Virginia Marine Resources Commission Shellfish Replenishment program. Each year, the number of seed oysters per bushel is estimated by using the average number of oysters per bushel at the seed sources as determined by the VMRC annual dredge survey in that year. Seed oysters are assumed to have shell lengths of 40 mm. There were no seed oysters transplanted in 1996.

D. Oyster Aquaculture

D1. Oyster gardening via CBF - Oyster planting by citizens, agencies, and the Chesapeake Bay Foundation on constructed reefs in Virginia waters began in 1996. Thus, no data are available in this category for 1995.

This summary sheet was assembled at the Virginia Institute of Marine Science by Drs. Roger Mann and Juliana M. Harding using data provided by the agencies and institutions listed above. Created 09/1/2005. Last modified 09/01/2005.

Chesapeake Bay Oyster Population Estimation - Basins

State: VIRGINIA

Year: 1996

	Potomac	Great/Little Wicomico	Rappahannock	Piankatank	York/Mobjack Bay	Poquoson/Back	James	Lynnhaven	Eastern Shore/Tangier		
A. Fishery Independent survey											
Average number of oysters/m2				26.7			72.3		3.2		
Average oyster biomass/m2				7.5			27.6		1.2		
Number of reefs surveyed				9			23		8		
Acres surveyed				209			5956		288		
Number of samples				78			822		69	1.77E+09	6.72E+08
B. Fishery Dependent survey											
B1. Public/Commercial effort											
Public VA landings (bushels x 1000)	8.8									4.40E+06	3.75E+06
B2. Private effort											
Private VA landings (bushels x 1000)	14.5									7.27E+06	6.2E+06
C. Restoration efforts											
C1. Reefs/unexploited sanctuaries											
Average number of oysters/m2	The VMRC Dive survey was started in 1997. No data are available for 1996.										
Average oyster biomass/m2											
Number of reefs surveyed											
Acres surveyed										0.00E+00	0.00E+00
C2. Replenishment/exploited ground											
Average number of oysters/m2	There were no seed oysters planted by the VMRC replenishment program during 1996.										
Average oyster biomass/m2											
Number of reefs surveyed											
Acres surveyed										0.00E+00	0.00E+00
D. Oyster Aquaculture											
D1. Oyster gardening via CBF											
Total number of oysters/m2	92.7										
Total oyster biomass/m2	78.9										
Number of reefs surveyed	1										
Acres surveyed	2									7.50E+05	6.39E+05
Grand total number of oysters										1.78E+09	
Grand total oyster biomass											6.83E+08
